This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

GENERAL INFORMATION

Directions for Ordering Supplies

PUBLISHERS are earnestly requested to carefully consider their supply orders before placing them. We cannot exchange or give credit for matrices, molds, or other supplies furnished on order, as the labor and expense of testing, inspecting, and sorting forbid our doing so. Supplies thus furnished are, therefore, useless to us if returned.

Customers are cautioned to carefully observe the instructions given below when ordering supplies. By so doing they will avoid mistakes, and save time and trouble.

When ordering matrices use printed Matrix Order Blanks, which we supply free on request.

State plainly name of font and number of face desired, specifying whether fractions are wanted, and if so whether they are to be on an "em" or "en" or "figure set," and whether they are to be run in keyboard, pi box, or in special channels.

When ordering sets of caps or lower case matrices, state if a to z only are wanted.

If you are using No. 1 faces with No. 2 table characters, or No. 2 faces with No. 1 table characters, or any other combination of faces, please specify this in your order.

When ordering italics, black faces, or special matrices, always specify whether they are to run pi or in the magazine.

When ordering 11-point Gothic head letter matrices, state whether they are to be used on 9-point or 11-point body.

Matrices for sorting up can be furnished, independent of sets, in any quantities.

If you are in doubt as to the number of the face you are using, send a lower case "n" matrix.

Fractions in German faces are always furnished to run in the pi box.

We carry in stock pine trays to hold a full set of matrices, which will be found very convenient for handling and storing sets of matrices not in actual use. These we supply at $1.00 each.

Always state plainly how you wish goods shipped—whether by freight, express, or by mail; and if a special route is desired, name it. Otherwise we shall exercise our judgment.

It is important that supply orders should be sent either to one of the agencies or to the factory direct, not to the main office, New York.

Remember that unless your order is plain and in accordance with the above instructions, vexatious delays are liable to occur.

Vertical Slug One-letter	.....	0 03
Vertical Slug Two-letter	.....	0 04½
Rogers Tabular Matrices	55 00	0 04½

One and two-letter sets in any face from 5-point to 14-point inclusive, if made up according to standard list, are $40 and $66 respectively per set; if changes are required an additional charge will be made.

DUPLICATE CHARACTER MATRICES are made with identically the same character in both positions and can be used in either upper or lower position in connection with one- and two-letter matrices, without shifting the line.

TWO-LINE MATRICES are used principally for initial letters and "ads.," casting on the first slug and overhanging the second. They can be used for head lines by casting them on an 11-point body.

SECTIONAL MATRICES are used for advertising work requiring large figures. The top section casts on the first slug and the bottom on the second; the two complete the character.

VERTICAL SLUG MATRICES have the character punched crosswise of the matrices and cast it horizontally on the slug, permitting the slug to be turned vertically to produce a column of figures in print.

RIVETED MATRICES represent two or more characters combined to produce a single character, logotype, or word. The charge for this style of matrix is 3 cents for each matrix composing the character and 10 cents additional for riveting. For two-letter the price is 4½ cents for each character and 10 cents for riveting.

GENERAL INFORMATION

HAIR SPACES are very thin spaces, grading in .001 of an inch from .012 to .020. They are similar in shape to the "en" and "em" spaces, but are inserted in the line by hand and automatically returned by the machine to the quad box. These should not be confounded with the regular thin spaces measuring .028, .031, .035, .0385, .042, and .049.

ACCENTED CAPITALS can be furnished reduced in height to cast on a regular body, or made full height to cast on a larger body, the increased thickness to go on the top of the slug, in which case a special mold is required.

Superior and Inferior Figures can be used for extended fractions, footnotes, powers, etc.

Should you return matrices to us at any time, please see that they are carefully assorted by font, face, and character—that is, put all A's together, all B's together, etc., of each font. By so doing you will save time and expense, as we invariably charge for this work.

If sets are required to be broken and other characters substituted in place of those regularly supplied, it will be done upon request. There will, however, be a charge of $1 per font for doing this, as it entails extra labor and a second handling, as well as inspection and recounting.

BORDER MATRICES, to be assembled in lines and used in any Linotype machine in connection with the ordinary mold, **do not demand the use of any extra parts in the machine.** Order by number and note that the corner pieces have special numbers. Sets of 26 matrices, $2.50; single matrices, 10 cents each.

MATRIX SLIDES, complete in one piece, are used in the machine with the regular mold. One quad block must be had to hold the slides, which are interchangeable and produce rules, dashes, and borders in great variety, in every way as perfect as those of brass. Quad blocks, 13½ to 30 ems, $2.00; 13 ems and under, $1.75. Matrix Slides, any pattern, 13½ to 30 ems, $1.25; 13 ems and under, $1.00.

SPACEBANDS are now made in three classes—thin, thick, and extra thick. The thin spacebands present a minimum thickness of .032 of an inch and expand to .095 of an inch. These are for use where very thin spacing is desired, as, for example, in connection with very small faces. Thick spacebands present a minimum thickness of .0375 of an inch and expand to .100 of an inch. These spacebands are most commonly used and are made for use with one- and two-letter matrices. Extra thick spacebands present a minimum thickness of .047 of an inch and expand to .147 of an inch. They are especially designed to save hand-spacing where large German matrices are used on narrow newspaper measure, and can also be used with 12-point faces, or where wide spacing is desired.

ROGERS TABULAR SYSTEM SPACEBANDS are made with an extra wide side to cover the slot in the matrices, and are sold at $1.00 each. **The regular spacebands cannot be used with Rogers Tabular Matrices.**

[ONE-LETTER]

Lower case alphabet 16.10 ems

THE MOST ancient materials employed for recording events were bricks, tiles, shells, and tables of stone. The modes of writing on these different substances were various. The tiles and bricks were impressed with a stamp when in a soft state; the shells or tablets of stone were etched or graven, the figures or characters being cut in their surface, and in some cases also stained with various colors. It was by the ancient art of stamping that the walls, palaces, and towers of Babylon were covered with hieroglyphics, which have but recently been brought to light from under the immense mounds of Mesopotamia by Layard and other explorers. The patriarch Job, who is supposed to have lived about 2,300 years after the creation, exclaimed, "O that my words were now written! O that they were printed in a book! that they were graven with an iron pen, and hid in the rock forever!" Stung with the unjust accusation of his friends, he desires to record his words that the

THE MOST ancient materials employed for recording events were bricks, tiles, shells, and tables of stone. The modes of writing on these different substances were various. The tiles and brick were impressed with a stamp when in a soft state; the shells or tablets of stone were etched or graven, the figures or characters being cut in their surface, and in some cases also stained with various colors. It was by the ancient art of stamping that the walls, palaces, and towers of Babylon were covered with hieroglyphics, which have but recently been brought to light from under the immense mounds of Mesopotamia by Layard and other explorers. The patriarch Job, who is supposed to have lived about 2,300 years after the creation, exclaimed, "O that my words were now written! O that they were printed in a book! that they were graven with an iron pen, and hid in the rock forever!" Stung by the unjust ac-

[ONE-LETTER]

THE MOST ancient materials employed for recording events were bricks, tiles, shells, and tables of stone. The modes of writing on these different substances were various. The tiles, and bricks were impressed with a stamp when in a soft state; the shells and tablets of stone were etched or graven, the figures or characters being cut in their surface, and in some cases also stained with various colors. It was by the ancient art of stamping that the walls, palaces, and towers of Babylon were covered with hieroglyphics, which have but recently been brought to light from under the immense mounds of Mesopotamia by Layard and other explorers. The patriarch Job, who is supposed to have lived about 2,300 years after the creation, exclaimed, "O that my words were now written! O that they were printed in a book! that they were graven with an iron pen and hidden in the rock forever!" Stung with the unjust accusation

THE MOST ancient materials employed for recording events were bricks, tiles, shells, and tables of stone. The modes of writing on these different substances were various. The tiles and brick were impressed with a stamp when in a soft state; the shells and tablets of stone were etched or graven, the figures or characters being cut in their surface, and in some cases also stained with various colors. It was by the ancient art of stamping that the walls, palaces, and towers of Babylon were covered with hieroglyphics, which have but recently been brought to light from under the immense mounds of Mesopotamia by Layard and other explorers. The patriarch Job, who is supposed to have lived about 2,300 years after the creation, exclaimed, "O that my words were now written! O that they were printed in a book! that they were graven with an iron pen and hid in the rock forever!" Stung with the unjust accusation of his friends, he desires to record his words that the generations following might see the justice of his cause. The English translation has given the allusion to printing to the text,

The most ancient materials employed for recording events were bricks, tiles, shells, and tables of stone. The modes of writing on these different substances were various. The tiles and brick were impressed with a stamp when in a soft state; the shells and tablets of stone were etched or graven, the figures or characters being cut in their surface, and in some cases also stained with various colors. It was by the ancient art of stamping that the walls and palaces of Babylon were covered with hieroglyphics, which have but recently been brought to light from under the immense mounds of Mesoptamia by Layard and other explorers. The patriarch Job, who is supposed to have lived about 2,300 years after the creation, exclaimed, " O that my words were now written! O that they were printed in a book! that they were graven with an iron pen and hid in the rock forever!" Stung with the unjust accusation of his friends, he desires to record his words that the generations following might see the justice of his cause. The English translation has given the allusion to printing to the text, the original word signifying rather to engrave on a plate, which was doubtless the only printing known to Job. Montfaucon purchased at Rome in 1699 an ancient book entirely composed of lead. It was about four inches long and

THE MOST ancient materials employed for recording events were bricks, tiles, shells, and tables of stone. The modes of writing on these different substances were various. The tiles and brick were impressed with a stamp when in a soft state; the shells and tablets of stone were etched or graven, the figures or characters being cut in their surface and in some cases also stained with various colors. It was by the ancient art of stamping that the walls, palaces, and towers of Babylon were covered with hieroglyphics, which have but recently been brought to light from under the immense mounds of Mesopotamia by Layard and other explorers. The patriarch Job, who is supposed to have lived about 2,300 years after the creation, exclaimed, "O that my words were now written! O that they were printed in a book! that they were graven with an iron pen, and hid in the rock forever!" Stung with the unjust accusation of his friends, he desires to record his words that the generations following might see the justice of his cause. The English translation has given the

So wenig für mein treues Volk als für Deutſche bedarf es einer Rechenſchaft über die Urſachen des Kriegs, welcher jetzt beginnt: klar liegen ſie dem unverblendeten Europa vor Augen. Wir erlagen unter der Uebermacht Frankreichs. Der Friede, der die Hälfte meiner Unterthanen mir entriß, gab uns ſeine Segnungen nicht, denn er ſchlug uns tiefere Wunden als ſelbſt der Krieg. Das Mark des Landes ward ausgeſogen. Die Hauptfeſtungen blieben vom Feinde beſetzt, der Ackerbau ward gelähmt, ſowie der ſonſt ſo hochgebrachte Kunſtfleiß unſerer Städte. Die Freiheit des Handels ward gehemmt und dadurch die Quelle des Erwerbes und des Wohlſtandes verſtopft. Das Land ward ein Raub der Verarmung. Durch die ſtrengſte Erfüllung eingegangener Verbindlichkeiten hoffte ich meinem Volke Erlichterung zu verſchaffen, und den franzöſiſchen Kaiſer endlich zu überzeugen, daß es ſein eigener Vortheil ſei, Preußen ſeine Unabhängigkeit zu laſſen. Aber meine reinſten Abſichten wurden durch Uebermuth

[TWO-LETTER]

Lower case alphabet 15.46 ems.

The most ancient materials employed for recording events were bricks, tiles, shells, and tables of stone. The modes of writing on these different substances were various. The tiles and brick were impressed with a stamp when in a soft state; the shells and tablets of stone were etched or graven, the figures or characters being cut in their surface, and in some cases also stained with various colors. It was by the ancient art of stamping that the walls, palaces, and towers of Babylon were covered with hieroglyphics, which have but recently been brought to light from under the immense mounds of Mesopotamia by Layard and other explorers. The patriarch Job, who is supposed to have lived about 2,300 years after the creation, exclaimed, "O that my words were now written! O that they were printed in a book! that they were graven with an iron pen, and hid in the rock forever." Stung with the unjust accusation of his friends, he desires to record his words that the generations following might see the justice of his cause. The English translation has given the allusion to printing to the text, the original word signifying rather to engrave on a plate, which was doubtless the only printing known to Job. Montfaucon purchased at Rome in 1699 an ancient book entirely composed of lead. It was about four inches long and three

Lower case alphabet 15.42 ems

THE MOST ancient materials employed for recording events were bricks, tiles, shells, and tables of stone. The modes of writing on these different substances were various. The tiles and brick were impressed with a stamp when in a soft state; the shells and tablets of stone were etched or graven, the figures or characters being cut in their surface, and in some cases also stained with various colors. It was by the ancient art of stamping that the walls, palaces, and towers of Babylon were covered with hieroglyphics, which have but recently been brought to light from under the immense mounds of Mesopotamia by Layard and other explorers. The patriarch Job, who is supposed to have lived about 2,300 years after the creation, exclaimed, "*O that my words were now written! O that they were printed in a book! that they were graven with an iron pen, and hid in the rock*

Lower case alphabet 15.83 ems

The most ancient materials employed for recording events were bricks, tiles, shells and tables of stone. The modes of writing on these different substances were various. The tiles and brick were impressed with a stamp when in a soft state; the shells and tablets of stone were etched or graven, the figures or characters being cut in their surface, and in some cases also stained witn various colors. It was by the ancient art of stamping that the walls, palaces, and towers of Babylon were covered with hieroglyphics, which have but recently been brought to light from under the immense mounds of Mesopotamia by Layard and other explorers. The patriarch Job, who is supposed to have lived about 2,300 years after the creation, exclaimed, "O that my words were now written! O that they were printed in a book! that they were graven with an iron pen and hid in the rock forever!" Stung with the unjust accusation of his friends, he desires to record his words that the generations following might see the justice of his cause. The English translation has given the

[TWO-LETTER]

Lower case alphabet 15.71 ems

The most ancient materials employed for recording events were bricks, tiles, shells, and tables of stone. The modes of writing on these different substances were various. The tiles and brick were impressed with a stamp when in a soft state; the shells and tablets of stone were etched or graven, the figures or characters being cut in their surface, and in some cases also stained with various colors. It was by the ancient art of stamping that the walls, palaces, and towers of Babylon were covered with hieroglyphics, which have but recently been brought to light from under the immense mounds of Mesopotamia by Layard and other explorers. The patriarch Job, who is supposed to have lived about 2,300 years after the creation, exclaimed, "O that my words were now written! O that they were printed in a book! that they were graven with an iron pen, and hid in the rock forever!" Stung with the unjust accusation of his friends, he desires to record his words that the generations

[ONE-LETTER]

Lower case alphabet 15.35 ems

THE MOST ancient materials employed for recording events were bricks, tiles, shells, and tables of stone. The modes of writing on these different substances were various. The tiles and brick were impressed with a stamp when in a soft state; the shells and tablets of stone were etched or graven, the figures or characters being cut in their surface, and in some cases also stained with various colors. It was by the ancient art of stamping that the walls, palaces, and towers of Babylon were covered with hieroglyphics, which have but recently been brought to light from under the immense mounds of Mesopotamia by Layard and other explorers. The patriarch Job, who is supposed to have lived about 2,300 years after the creation, exclaimed, *" O that my words were now written! O that they were printed in a book! that they were graven with an iron pen, and hid in the rock forever!"* Stung with the unjust accusation of his friends, he desires to record his words that the generations following

[TWO-LETTER]

Lower case alphabet 14.37 ems

THE MOST ancient materials employed for recording events were bricks, tiles, shells, and tablets of stone. The modes of writing upon these different substances were various. The tiles and brick were impressed with a stamp when in a soft state; the shells and tablets of stone were etched or graven, the figures or characters being cut in their surface, and in some cases also stained with various colors. It was by the ancient art of stamping that the walls, palaces, and towers of Babylon were covered with hieroglyphics, which have but recently been brought to light from under the immense mounds of Mesopotamia by Layard and other explorers. The patriarch Job, who is supposed to have lived about 2,300 years after the creation, exclaimed, "*O that my words were now written! O that they were printed in a book! that they were graven with an iron pen, and hid in the rock forever!*" Stung with the unjust accusation of his friends, he desires to record his words that the generations following might see the justice of his cause. The English translation has given the allusion to printing to the text, the original word signifying rather

[TWO-LETTER]

Lower case alphabet 13.01 ems

So wenig für mein treues Volk als für Deutſche bedarf es einer Rechenſchaft über die Urſachen des Kriegs, welcher jetzt beginnt: klar liegen ſie dem unverblendeten Europa vor Augen. Wir erlagen unter der Uebermacht Frankreichs. Der Friede, der die Hälfte meiner Unterthanen mir entriß, gab uns ſeine Segnungen nicht, denn er ſchlug uns tiefere Wunden, als ſelbſt der Krieg. **Das Mark des Landes ward ausgeſogen.** Die hauptfeſtungen blieben vom Feinde beſetzt, der Ackerbau ward gelähmt, ſowie der ſonſt ſo hochgebrachte Kunſtfleiß unſerer Städte. Die Freiheit des Handels ward gehemmt, und dadurch die Quelle des Erwerbes und des Wohlſtandes verſtopft. Das Land ward ein

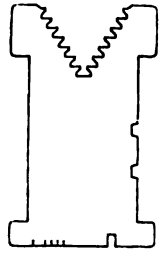
10-POINT RUSSIAN OLD STYLE WITH ANTIQUE NO. 1
[TWO-LETTER]

Lower case alphabet 20.55 ems



Первая заповѣдь состояла въ томъ, что человѣкъ не только не долженъ убивать, но не долженъ гнѣваться на брата, не долженъ никого считать ничтожнымъ, „рака“, а если поссорится съ кѣмъ-либо, долженъ мириться прежде, чѣмъ приносить даръ Богу, т. е. молиться.

Вторая заповѣдь состояла въ томъ, что человѣкъ не только не долженъ прелюбодѣйствовать, но долженъ избѣгать наслажденія красотою женщины, долженъ, разъ, сойдясь съ одной женщиной, никогда не измѣнять ей.

Третья заповѣдь состояла въ томъ, что человѣкъ не долженъ обѣщаться въ чемъ-нибудь съ клятвою.

Четвертая заповѣдь состояла въ томъ, что человѣкъ не только не долженъ воздавать око за око, но долженъ подставлять другую щеку, когда ударятъ по одной, долженъ прощать обиды и съ смиреніемъ нести ихъ и никому не отказывать въ томъ, чего хотятъ отъ него люди.

Пятая заповѣдь состояла въ томъ, что человѣкъ не только не долженъ ненавидѣть враговъ, не воевать съ ними, но долженъ любить ихъ, помогать, служить имъ.

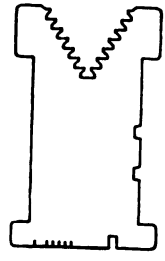
10-POINT SERVIAN OLD STYLE WITH ANTIQUE NO. 1
[TWO-LETTER]

Lower case alphabet 16.93 ems



ТРЕЋИ ПЕРИОД. Страдање српског народа. (Од 1367—1804. год.) Други период српске историје јест период славе српског народа; напротив трећи је период пун догађаја, који ожалошћавају, јер су јасни знаци тога, како је српски народ у својој снази слабио и падао, како је најпосле грехом својих старешина, дошао до пропасти.

Одломци из песама Јелене Поповићеве: Кад би могла у зорицу белу, Да посетим горицу зелену, Да накидам бршљана и лишћа, Те би села украј поточића, Па би онда зелен венац вила, И овако тијо беседила: Како ли се зелен венац вио, И по бистрој водици пловио, Тако и Ти да би роде мио, Стару славу српску задобио. Док би тако тихо беседила, Суза би се у поточић слила, Не би л' суза до Босне пловила, Тужној земљи путе отворила, Сретне путе и слободе миле, Да избави те патнике живе.

А где је? А где је сада радост и нада? Ружица бела, што је увела? И уста мала, што су ме звала: Рођена мајко! Беше ми слатко. Мајкина мила, руке савила, На веки спава, Милица мала. — Панчево, 1873.

6-POINT CLARENDON NO. 1

[ONE-LETTER]

Lower case alphabet 16.36 ems

The most ancient materials used for recording events were bricks, tiles, shells, and tables of stone. The modes of writing on these different substances were various. The tiles and brick were impressed with a stamp when in a soft state; the shells and tablets of stone were etched or graven, the figures or characters being cut in their surface, and in some cases also stained with various colors. It was by the ancient art of stamping that the walls, palaces, and towers of Babylon were covered with hieroglyphics, which have but recently been brought to light from under the immense mounds of Mesopotamia by Layard and other explorers. The patriarch Job, who is supposed to have lived 2,300 years after the creation, exclaimed, " O that my words were now written! O that they were printed in a book! that they were graven with an iron pen, and hid in the rock forever!" Stung with the unjust accusation of his friends, he desires to record his words that the generations following might see the justice of his cause. The English translation has given the allusion to printing to the text, the original word signifying rather to engrave

Montfaucon purchased at Rome in 1699

The most ancient materials used for recording events were bricks, tiles, shells, and tables of stone. The modes of writing on these different substances were various. The tiles and brick were impressed with a stamp when in a soft state; the shells and tablets of stone were etched or graven, the figures or characters being cut in their surface, and in some cases also stained with various colors. It was by their art of stamping that the walls and palaces of Babylon were covered with hieroglyphics, which have but recently been brought to light from under the immense mounds of Mesopotamia by Layard and other explorers. The patriarch Job, who is supposed to have lived 2,300 years after the creation, exclaimed, "O that my words were now written! O that they were printed in a book! that they were graven with an iron pen, and hid in the rock forever!" Stung with the unjust accusation of his friends, he desires to record his words so that the coming generations might see the justice of his cause. The English translation has given

The tiles and brick were impressed with a stamp when in a soft state; the shells and tablets of stone were etched or graven, the figures or characters being cut in their surface, and in some cases also stained with various colors. It was by the ancient art of stamping that the walls, palaces, and towers of Babylon were covered with hieroglyphics, which have but recently been brought to light from under the immense mounds of Mesopotamia by Layard and other explorers. The patriarch Job, who is supposed to have lived about 2,300 years after the creation, exclaimed, "O that my words were now written! O that they were printed in a book! that they were graven with an iron pen, and hid in the rock forever." Stung by the unjust accusation of his friends he desires to record his words that the generations following might see the justice of his cause.

So wenig für mein treues Volk als für Deutſche bedarf es einer Rechenſchaft über die Urſachen des Kriegs, welcher jetzt beginnt: klar liegen ſie dem unverblendeten Europa vor Augen. Wir erlagen unter der Uebermacht Frankreichs. Der Friede, der die Hälfte meiner Unterthanen mir entriß, gab uns ſeine Segnungen nicht, denn er ſchlug uns tiefere Wunden, als ſelbſt der Krieg. Das Mark des Landes ward ausgeſogen. Die Hauptfeſtungen blieben vom Feinde beſetzt, der Ackerbau ward gelähmt, ſowie der ſonſt ſo hochgebrachte Kunſtfleiß unſerer Städte. Die Freiheit des Handels ward gehemmt, und dadurch die Quelle des Erwerbes und des Wohlſtandes verſtopft. Das Land ward ein Raub der Verarmung. Durch die ſtrengſte Erfüllung eingegangener Verbindlichkeiten hoffte ich meinem Volke Erleichterung zu ver-

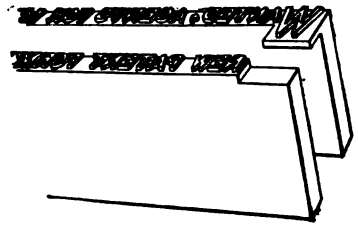
TWO-LINE INITIAL MATRICES AND ATTACHMENTS



The Two-Line Initial letters shown in this circular are produced as shown in the cut. The 12-point letters are cast on a 6-point slug, the 11-point letters on a 5½-point slug, and the 10-point letters on a 5-point slug. The initial letter is put in the assembler with the first line of the item being set. The metal flows in and makes a complete face of the large letter which overhangs the bottom of the first slug as shown in the cut. In the second line the initial letter is raised to the auxiliary position so that it will not cast, but will leave a blank on the end of the slug.

When two slugs are placed together the overhanging letter on the first slug will rest on top of the second slug, making an initial covering the two lines in depth.

Special trimming knives are required for these characters.

Price of knife attachment and alphabet of matrices $25.00, single matrices as sorts 3 cents each.

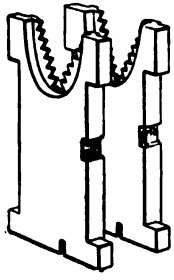
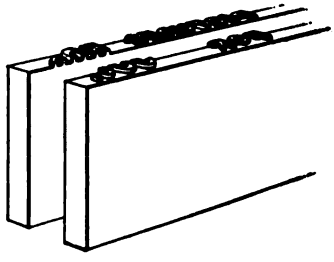
SECTIONAL ADVERTISING FIGURES





The two-piece or sectional characters are made in a different manner from the solid or two-line initial characters. The upper half of the character is on one matrix, the lower half on another (except the two-letter sets, where both are on the same matrix in the regular and auxiliary positions).

To use these matrices, place the matrix containing the upper half of the character you desire to produce in the assembler with the first line of the item you are setting, then place the matrix containing the lower half of the letter in the second line of the item, and when the two slugs are placed together they make the large or two-line characters, as shown in the illustration. These letters and figures are very useful for advertising purposes.

The 11-point two-piece characters cast on two 5½-point slugs, the 12-point on two 6-point slugs, the 16-point on two 8-point slugs, and the 24-point on two 10-point slugs.

These matrices are sold as sorts, each matrix containing but one-half of the character, at 3 cents each, making the total of each complete character 6 cents.

TWO-PIECE LETTERS AND FIGURES

(TWO-LETTER MATRICES)

These matrices differ from the one-letter in that they have the complete character on each matrix, the upper half of the character being in the auxiliary position and the lower half in the standard position. They are used in the same manner as the one-letter matrices, except that to obtain the upper half of the letter or figure, the matrix is placed in the upper or auxiliary position, and to obtain the lower half, the matrix is dropped to the standard position in the second line, and when the two slugs are placed together they form the two-line letter or figure covering the first two lines of the item being set.

Price of two-piece two-letter matrices 4½ cents each, each matrix producing a complete letter or figure.

Rogers Tabular System

Digitized by Google

BY THIS SYSTEM, invented by Mr. J. R. Rogers and adopted by the Linotype Company, it becomes possible to set rule and figure matter and tables in general on the Linotype machine with rapidity and accuracy and at a cost below that possible under any other system.

The appliances for this work are quickly applicable to all existing Linotype machines.

The machine produces the ordinary horizontal slugs, having therein slots to receive shallow brass rules. The slugs are delivered from the machine with the slots therein, and no sawing, cutting or other treatment is necessary. After the proofs are pulled and corrections made, the rules may be inserted in an instant, and when the form is locked up the rules are held securely in place.

VERTICAL SLUG TABLE MATRICES

These matrices differ from the ordinary matrices only in that the characters are punched horizontally or transversely in the edge instead of vertically.

The characters, on the vertical slug, appear one under another instead of one beside another, as on the usual slug. In making up the form, the vertical slugs are placed end up and arranged side by side.

For further information see our circular, "Tabular Matter and the Linotype."

Border Matrices Slides, etc.

Digitized by Google

BORDER MATRICES AND MATRIX SLIDES FOR BORDERS, RULES AND DASHES.

Two classes of matrices are shown herein:

BORDER MATRICES, similar to letter matrices, to be assembled in lines and used in any Linotype machine in connection with the ordinary mold.

They do not demand the use of any extra parts in the machine.

By setting these matrices of different designs, in different combinations, a great variety of effects may be produced.

Order by number, and note that corner-pieces have special numbers.

PRICES:

Sets of 26 matrices.....$2.50
Single matrices ..... .10

MATRIX SLIDES. These slides are each complete in one piece, and are used in

the machine in connection with the regular mold.

NOTE that one quad block must be provided to sustain the slides, which can be substituted one for another at will.

These slide matrices produce borders, rules and dashes, in great variety, without joints or breaks therein, and in every way as perfect as those of brass.

Quad Blocks.

13½ to 30 ems	$2.00
13 ems and under	1.75

Matrix Slides, any pattern.

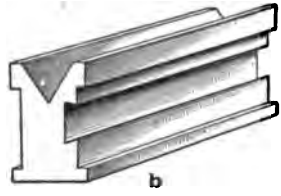
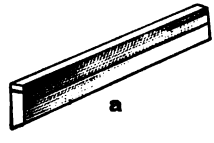
DASH QUAD BLOCK AND MATRIX SLIDES





THESE cuts show a Dash Quad Block (b) and a removable Matrix Slide (a). The Quad block, containing a matrix slide, is placed in the assembling elevator in the same manner as a line of sorts. The transfer lever is then locked, and any number of dashes may then be produced.

With one Dash Quad Block and a few Matrix Slides (which are interchangeable) the entire cost of brass rules, dashes, etc., may be saved.

These rules are ordinarily made to cast on a 6-Point body, but can be cast on any size from 5½-Point to 12-Point, according to the thickness of the face. They are made any length desired up to 30 ems 12-Point. In ordering please state both the length of face and body desired.

[ONE-LETTER]

Lower case alphabet 15.6 *ems*

THE MOST ANCIENT MATERIALS employed for recording events were bricks, tiles, shells, and tables of stone. The modes of writing on these different substances were various. The tiles and brick were impressed with a stamp when in a soft state; the shells and tablets of stone were etched or graven, the figures or characters being cut in their surface, and in some cases also stained with various colors. It was by the ancient art of stamping that the walls, palaces, and towers of Babylon were covered with hieroglyphics, which have but recently been brought to light from under the immense mounds of Mesopotamia by Layard and other explorers. The patriarch Job, who is supposed to have lived about 2,300 years after the creation, exclaimed, "O THAT MY WORDS WERE NOW WRITTEN! O that they were printed in a book! that they were graven with an iron pen, and hid in the rock forever!" Stung with the unjust accusation of his friends, he desires to record his words that the generations following might see the justice of his cause. The English translation has given the allusion to printing to the text, the original word signifying rather to engrave on a plate, which was doubtless the only printing known to Job. Montfaucon purchased at Rome in 1699 an ancient book entirely composed of lead. It was about four inches long and three inches wide; and not only were the two pieces that formed the cover, and the leaves, six in number, of lead, but also the stick inserted through the rings to hold the leaves together, as well as the hinges and nails. It contained figures of Egyptian idols, and unintelligible writing. China, our ancestor in invention, from remote ages had a kind of stereotyping or printing. It was not, however, as some have supposed, like our printing, phonetic, or the expression of sound, but, like the Egyptian, hieroglyphical; being purely of an artificial structure, denoting every idea by its appropriate sign without any relation to the utterance, and speaking to the eye like the numerical ciphers of the Europeans, which every one understands and utters in his own way. And like most other nations of antiquity, the Chinese were content to remain without alphabetical writing. It is, however, due to the Chinese to add, that they led the way in making good printing-paper. When they invented it does not appear, some affirming that they had the use of it from time immemorial; others that they first discovered it in the second century of the Christian era. Brass, as more durable, was used for inscriptions designed to last the longest, such as treaties, laws, and alliances. Seals, also, were used by the ancients for impressing soft substances. In the British Museum there is a stamp of metal with raised

And like most other nations of antiquity, the Chinese were content to remain without alphabetical writing. It is, however, due to the Chinese to add, that they led the way in making good printing-paper. When they invented it does not appear, some affirming that they had the use of it from time immemorial, others that they first discovered it in the second century of the Christian era. Brass, as more durable, was used for inscriptions designed to last the longest, such as treaties, laws, and alliances. Seals, also, were used by the ancients for impressing soft substances. In the British Museum there is a stamp of metal with raised letters. On the back of it is a ring, enabling the owner to wear it as a signet. His name, Caius Julius Caecilius Hermias, being engraved in reversed letters upon it. This seal of Hermias was intended for stamping parchment with ink, as is shown by the fact that the roughness of the surface below the letters unfits it for stamping any soft substance into which it would sink, as into wax. If rubbed with printing ink and pressed upon paper, it prints very well. Thus the seed of this noble art was among the Romans. With a block of wood covered with raised letters, they might have printed a page, as well as a single name. But they were suffered to grope their way from age to age blindfolded to the art of which they had the clew. They almost grasped the great discovery, unconscious of the prize. Quintilian, speaking of the education of youth, says, When the boy has begun to trace the forms of the letters,

9-POINT (CORPS 9) NO. 28 WITH ITALIC AND SMALL CAPS

[TWO-LETTER]

WIDTH OF 9-POINT LOWER CASE ALPHABET

Linotype System	15.12	*9-point ems*
French Didot System	14.27	*9-point ems*
French Didot System	10.7	*12-point ems*

THE MOST ANCIENT MATERIALS employed for recording events were bricks, tiles, shells, and tables of stone. *The modes of writing on these different substances were various.* The tiles and brick were impressed with a stamp when in a soft state; the shells and tablets of stone were etched or graven, the figures or characters being cut in their surface, and in some cases also stained with various colors. It was by the ancient art of stamping that the walls, palaces, and towers of Babylon were covered with hieroglyphics, which have but recently been brought to light from under the immense mounds of Mesopotamia by Layard and other explorers. The patriarch Job, who is supposed to have lived about 2,300 years after the creation, exclaimed, "O THAT MY WORDS WERE NOW WRITTEN! *O that they were printed in a book! that they were graven with an iron pen, and hid in the rock forever!*" Stung with the unjust accusation of his friends, he desires to record his words that the generations following might see the justice of his cause. The English translation has given the allusion to printing to the text, the original word signifying rather to engrave on a plate, which was doubtless the only printing known to Job. Montfauçon purchased at Rome in 1699 an ancient book entirely composed of lead. It was about four inches long and three inches wide; and not only were the two pieces that formed the cover, and the leaves, six in number, of lead, but also the stick inserted through the rings to hold the leaves together, as well as the hinges and nails. It

The English translation has given the allusion to printing to the text, the original word signifying rather to engrave on a plate, which was doubtless the only printing known to Job. Montfauçon purchased at Rome in 1699 an ancient book entirely composed of lead. It was about four inches long and three inches wide; and not only were the two pieces that formed the cover, and the leaves, six in number, of lead, but also the stick inserted through the rings to hold the leaves together, as well as the hinges and nails. It contained figures of Egyptian idols, and unintelligible writing. China, our ancestor in invention, from remote ages had a kind of stereotyping or printing. It was not, however, as some have supposed, like our printing, phonetic, or the expression of sound, but, like the Egyptian, hieroglyphical; being purely of an artificial structure, denoting every idea by its appropriate sign without any relation to the utterance, and speaking to the eye like the numerical ciphers of the Europeans, which every one understands and utters in his own way. And like most other nations of antiquity, the Chinese were content to remain without alphabetical writing. It is, however, due to the Chinese to add, that they led the way in making good printing-paper. When they invented it does not appear, some
